REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest a virtual input/output (I/O) interconnect mechanism having a plurality of I/O devices and a plurality of processing units, the mechanism comprising: a reroute module identification block that receives the destination address from a range register decoder, the reroute module identification block, comprising: an original module identification that provides an address of one or more original modules in the computer system, and a remapped module identification that provides logical destination module identifications of substitute modules in the computer system, wherein a substitute module replaces functions of an original module in the computer system (claim 1); a method for rerouting a transaction along a virtual path from an original module to a substitute module comprising: storing a remapped module identification that identifies the substitute module as a substitute for the original module when the original module is failed; receiving a transaction for the failed original module, the transaction including an address of the failed original module; extracting the address; decoding the address to provide an identification of the failed original module for receipt of the transaction; comparing the identification of the failed original module to the remapped module identification; and rerouting the transaction to the substitute module based on the remapped module identification (claim 13); a method for creating a virtual hardware path in a computer system, comprising: storing an identification of the failed module and an identification of the substitute module, wherein the failed module identification is related to the substitute module identification; programming the

substitute module to receive transactions addressed to the failed module (claim 21); an apparatus that creates a virtual hardware path in a computer system, comprising: a reroute module identification block, comprising: an original module identification section, and a substitute module identification section, wherein an identification for a failed original module is entered into a space in the original module identification section and an identification for a substitute module is entered in to a space, corresponding to the space in the original module identification section, in the substitute module section; and programming adapted to the substitute module, wherein the substitute module is reprogrammed to claim transactions addressed to the failed original module and to copying a state of the failed original module to the substitute module (claim 23); and a method for replacing failed components, comprising: determining if a substitute component is available; suspending activities to the failed component if there is a substitute component found, copying a state of the failed component to the substitute component, deconfiguring the failed component, updating reroute module identification to remap the failed component to the substitute component, updating configuration registers of the substitute component, and resuming activities to the failed component (claim 24).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
